SVM

Parameter combinations

kernel	degree	gamma	epsilon	cache_size	verbose	max_iter	R_score
rbf	3	scale	0.1	200	False	-1	-0.5
rbf	4	Auto	0.5	500	True	1	-0.006
sigmoid	4	Auto	0.5	500	True	1	-0.0062
poly	3	scale	0.1	200	False	-1	-0.0508

Cannot use precomputed as getting error based on matrix

All the R_score values are very poor, so checking with the below one

Decision Tree

criterion	***splitter***	***max_depth***	***min_samples_split***	***min_samples_leaf***	***min_weight_fraction_leaf***	***max_features***	***random_state***	**max_leaf_nodes**	**min_impurity_decrease**	**ccp_alpha**	**R_score**
squared_error	*best*	*None*	2	1	0.0	None	None	None	0.0	0.0	0.9152
friedman_mse	*best*	*None*	2	1	0.0	None	None	None	0.0	0.0	0.9152

absolute_error	*random*	*None*	2	1	0.0	None	None	None	0.0	0.0	0.949
poisson	best	*None*	2	1	0.0	None	None	None	0.0	0.0	0.919
poisson	random	*None*	2	1	0.0	None	None	None	0.0	0.0	0.7945

The best R_Score is one highlighted above with value as 0.95
