Random Forest analysis

n_estimators	criterion	max_features	bootstrap	min_samples_split	min_samples_leaf	R_score
50	*squared_error*	1.0	True	2	1	0.944
50	*absolute_error*	1.0	True	2	1	0.9401
50	*friedman_mse*	1.0	True	2	1	0.938
50	***poisson***	**1.0**	**True**	**2**	**1**	**0.946**

The highlighted one looks better compared to other ones above – **0.946**

But this is low compared to decision tree **R_score. (0.95)**
